

# JUNIOR ALFA

## The innovative calf rearing feed

Supplementary feed for calves

Due to the balanced composition of alfalfa hay, flax, GMO-free soya, rapeseed, maize, cereals, dried pulp and minerals, Junior- ALFA meets the requirements for high daily gains in the first months of life of more than 950 g / day. The calf feed combines palatability, digestive support and structural efficiency, which in turn promotes early rumen development. It also has a high energy density and a near-optimal protein content of 19%.

**Dosage:** In addition to milk replacer or whole milk, Junior ALFA can be offered in a clean bowl for free intake from the 5th day of life, starting with a handful. Always offer only the best hay. After the milk has been weaned, it should be mixed with the TMR for a while, as otherwise the animals' growth will be impaired too much. When the calves eat enough TMR, they can wean Junior ALFA.

**Packaging:** Big Bag
