

KALZIPLExX

The optimal calcium supply
Supplementary feed for cattle

Our Kalziplexx - Boli contains calcium sources with different fast effects. The cow needs these to be able to absorb calcium immediately, after 6 and after 12 hours. After that, another bolus should be given if necessary. In addition, Kalziplexx contains phosphorus and vitamin D3. The phosphorus from the bolus is also quickly available to the animal. In contrast to the vitamin D3, which promotes the release of the minerals from the bone.

Most bolis on the market have a shell made of gelatine. Kalziplexx has a special cardboard casing and thus even adds some fibre, as it is digestible. The product is suitable for common boli feeders.

Dosage: Give one bolus shortly (approx. 12 hours) before or immediately after calving and an additional bolus 12 hours later.

Packing: 50 pieces; 90 pieces
