Spezialfutter Neuruppin GmbH & Co. KG

RUPPINER ELEKTROLYTE

Compensation of electrolyte losses in case of excessive sweating

Optimal for support during
intensive training phases

Especially suitable after
high fluid loss

Replenishing the mineral
stores

Ruppiner Elektrolyte is a feed supplement to compensate for electrolyte losses after sweating. Especially in case of increased demand due to heavy sweating or diarrhoea, it is important to ensure a balanced supply of the most important electrolytes. Especially during the hot months, a sufficient supply should be ensured, as horses can lose vital electrolytes through heavy sweating, which in turn are of enormous importance for the water balance of the horse. Heavy training sessions or transport can also be stressful for horses and reduce their performance. By feeding Ruppiner Elektrolyte, the mineral stores are replenished so that the horse's performance is maintained even during strenuous training phases.

Feeding recommendation: This supplementary feed may only be fed with up to 10 g / 100 kg body weight due to the higher content of vitamins compared to complete feeds. We recommend feeding over 1-3 days during heat, increased stress or increased fluid loss. Ruppiner Elektrolyte can be administered dry or dissolved in drinking water or with a mouth syringe. **ATTENTION:** Access to sufficient clean, fresh water must be guaranteed at all times.

Composition: Lucerne meal, linseed, extruded, wheat bran, extruded, grape seed meal and grape marc, dried

Analytical constituents and contents: 78% glucose, 6.0% sodium, 1.3% potassium, 0.77% chlorides, 0.0% calcium, 0.0% magnesium

Additives (per kg): Vitamin A: 40.000 I.U., Vitamin D: 10.000 I.U., Vitamin E: 300 mg, Vitamin C: 3.000 mg

Packing: 2 kg bucket
